PROFESSIONAL SUMMARY

AI and software development student at Zenith School of AI with hands-on experience building practical Python, MySQL, and computer vision projects. Developed systems spanning traffic-violation detection, ANPR/OCR, database applications, and safety visualization. Currently strengthening DSA in C++ while exploring cybersecurity, automation, and physical electronics to solve real-world problems.

TECHNICAL SKILLS

Programming: Python, C++

AI & Computer Vision: Artificial Intelligence, Computer Vision, OpenCV, ANPR, OCR, Image/Video Processing

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Problem Solving, Programming Fundamentals

Databases: MySQL, SQL, Database Management, CRUD Operations

Cybersecurity: Security Fundamentals, Security-Oriented Problem Solving

Engineering Interests: Automation, Physical Electronics, Emerging Technologies

FEATURED PROJECTS

AI Traffic Violation & Automatic Number Plate Recognition System | [Python](#) | [OpenCV](#) | [Computer Vision](#) | [ANPR](#) | [OCR](#)

- Developed a computer-vision traffic monitoring workflow to detect signal violations and identify vehicles from image/video input.
- Implemented ANPR and OCR to extract registration numbers and associate each detected violation with the relevant vehicle.
- Automated generation of digital challan records for identified vehicles, replacing manual identification and record creation steps.

Airport Management System | [Python](#) | [MySQL](#) | [SQL](#) | [Database Management](#)

- Built a Python application backed by MySQL to store, retrieve, and manage structured airport operations data.
- Implemented database-driven CRUD workflows and application logic using SQL and relational database principles.

Heat Map Safe | [Safety Analysis & Visualization](#)

- Created a technology-focused safety project using heat-map-based analysis and visualization for practical safety applications.

ACHIEVEMENTS

2nd Prize - Cybersecurity Competition | Recognized for security-focused problem solving and practical interest in cybersecurity.

EDUCATION

Zenith School of AI: Freshman - AI-focused program

Kendriya Vidyalaya: Science Stream

CURRENT LEARNING

Data Structures & Algorithms - C++: Currently learning and practicing

INTERESTS

Artificial Intelligence | Computer Vision | Software Development | Cybersecurity & Ethical Hacking | Automation | Physical Electronics | Emerging Technologies
